Headless CMS

- CMS: coupled CMS
- Headless CMS

Flutter for crafting Content-Rich Applications

Dynamic content delivery for diverse use cases

Personalisation and tailored experiences

Implementing content-driven features

- Flutter News Toolkit

Winning combination.

- Cross platforms capabilities
- Efficient data retrieval using GraphQL or RESTful APIs
- Transforming CMS data into Flutter widgets
- Real-time content updates
- Facilitating Collaboration

Common use cases

It varies from e-commerce websites to news letters to social media apps...

You can:

- Add a mobile application to an existing web app.
- Rebuild an existing web application using a modern framework
- Add a headless CMS in a modular way to an existing project

Hands on: Wordpress, Contentful.

Let's combine Flutter with both

- A hybrid headless CMS: Wordpress
- An Api driven headless CMS Contentful as a headless cms.

Hands on: Code base.

- Wordpress.
- Contentful.

Q&A

Ask your questions related to Flutter, Headless CMS, and mobile/web development in general

Thank you!
